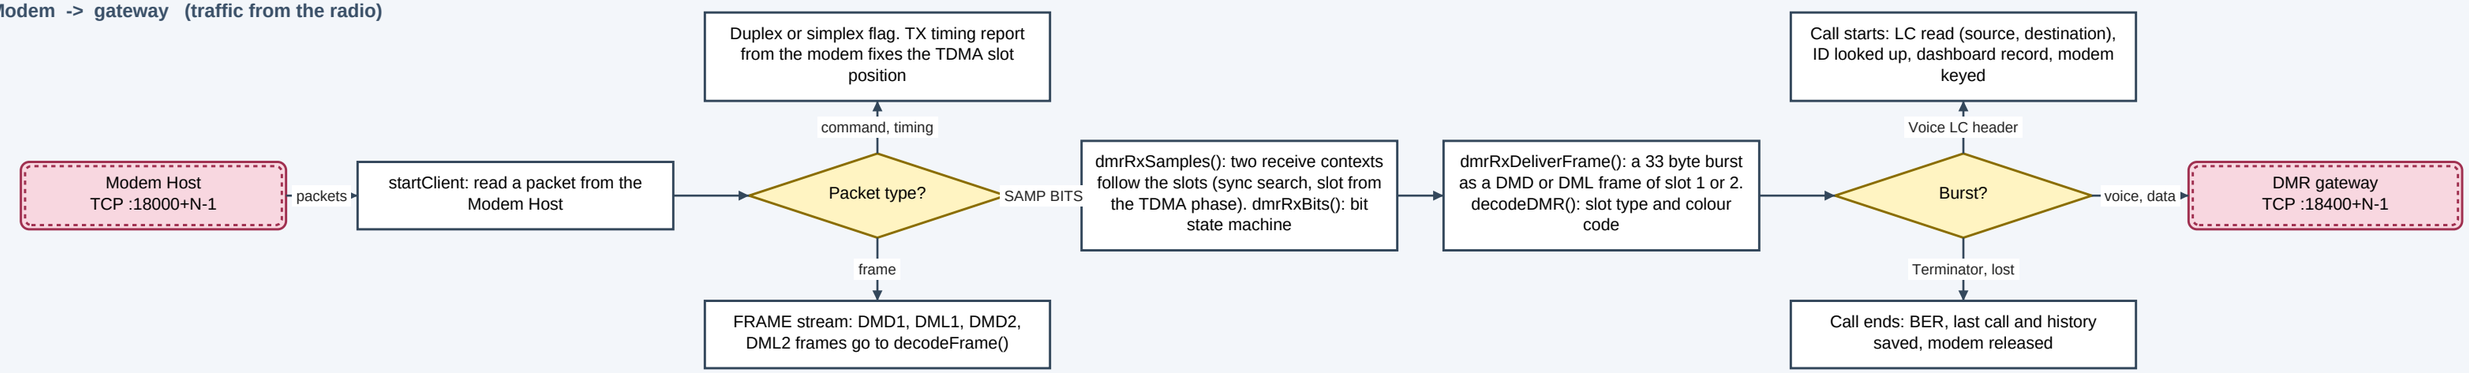
DMR Host (dmr_host) - flow chart

OpenMT - Rick KD0OSS

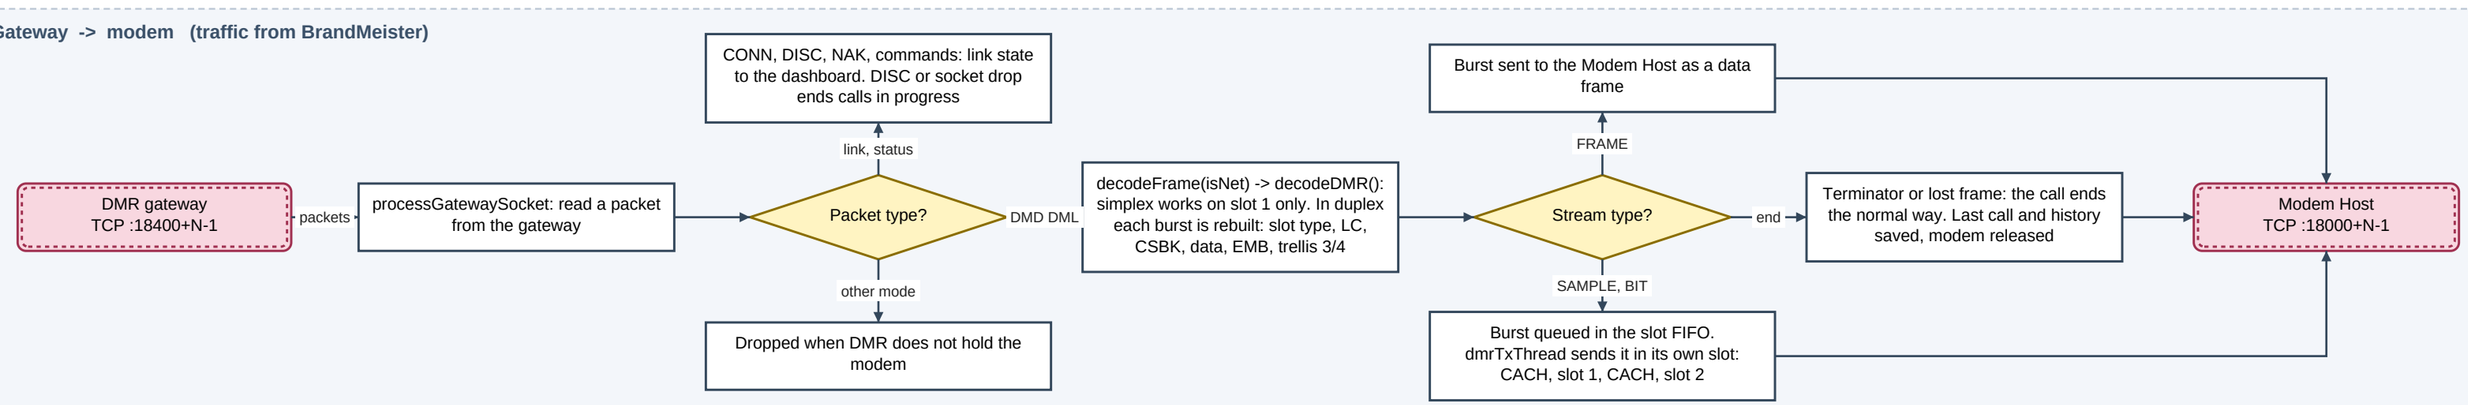
Two time slots, TDMA timing in the host. Talks to the Modem Host on :18000+N-1 and to the DMR gateway on :18400+N-1 (the gateway links to BrandMeister).

main() - start-up

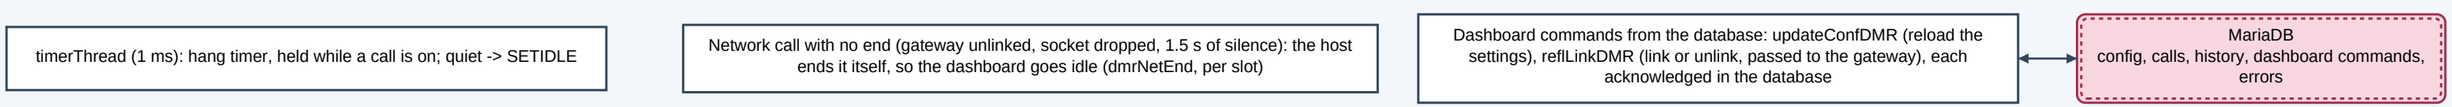
Modem -> gateway (traffic from the radio)



Gateway -> modem (traffic from BrandMeister)



Timers, dashboard commands and the database



Key

The TDMA scheduler (dmrTxThread) runs all the time with an absolute-deadline clock, so the 30 ms slot and 60 ms cycle do not drift. Rate 1 data and the PI header are repeated as received.
