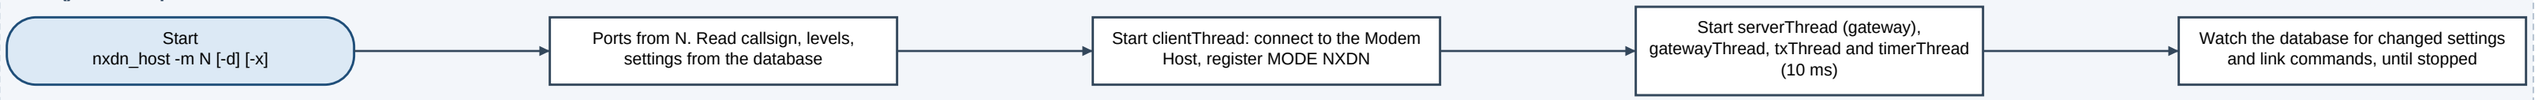
NXDN Host (nxdn_host) - flow chart

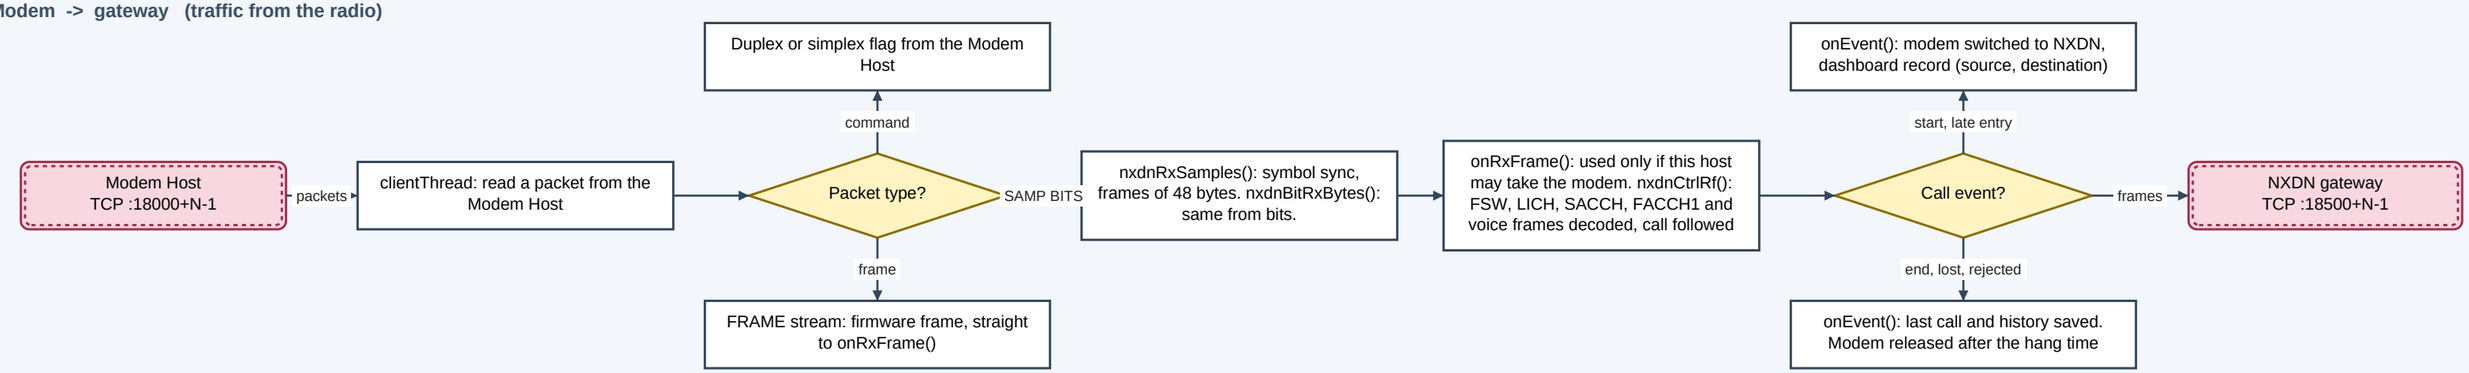
OpenMT - Rick KD0OSS

Talks to the Modem Host on :18000+N-1 and to the NXDN gateway on :18500+N-1. The call logic is in the control module (nxdn_func.c) that this host drives.

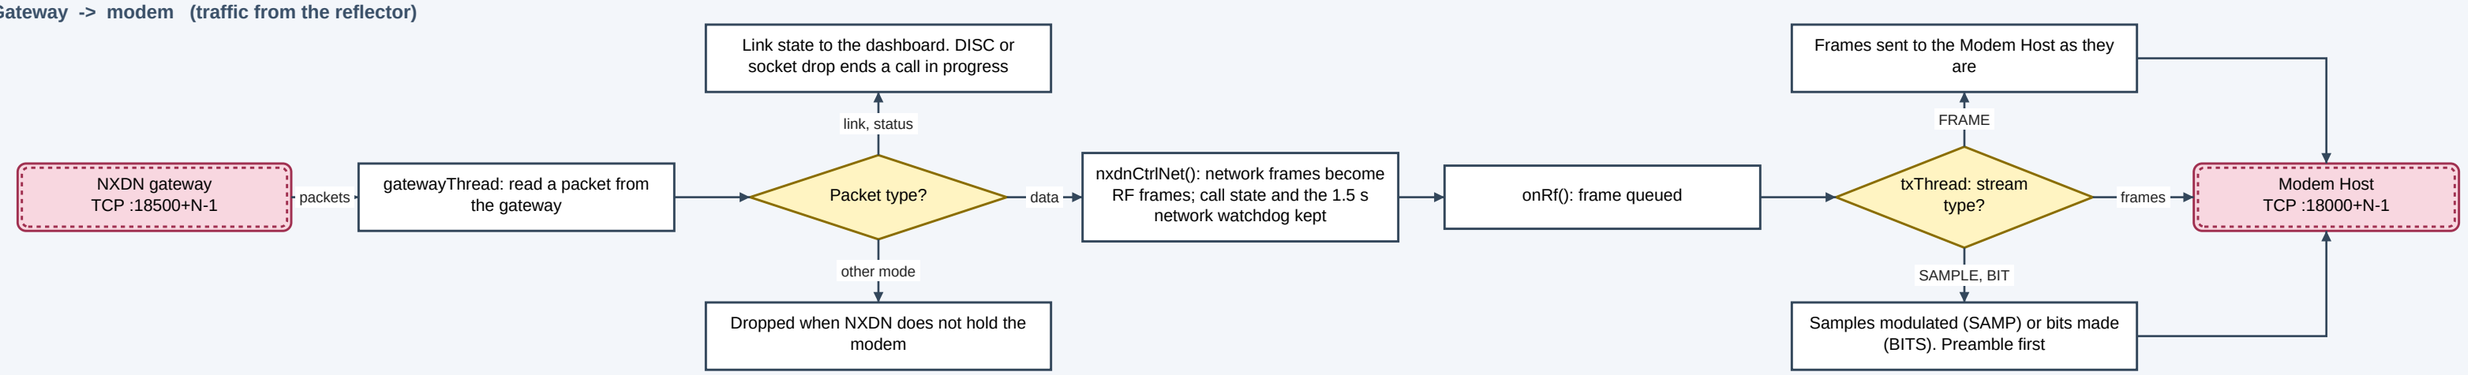
main() - start-up



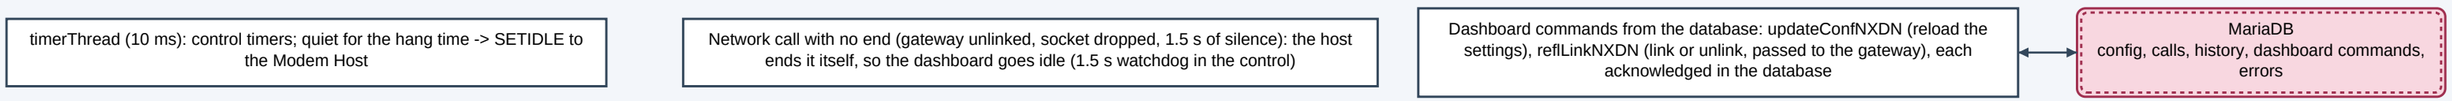
Modem -> gateway (traffic from the radio)



Gateway -> modem (traffic from the reflector)



Timers, dashboard commands and the database



Key

step · decision · start / thread · outside / database / network · modem hardware · queue / buffer

A transmission ends with the end frame, or when a frame is more than 400 ms late (TX_UNDERRUN_MS). Errors go to the error log with reportError().
